

Experience Summary:

Liquid-to-Compressed Natural Gas Fuel Station Design/Build

GP Strategies™ is a leader in the design and construction of liquefied natural gas (LNG) and liquid-to-compressed natural gas (LCNG) fueling facilities.

Construction Services

GP Strategies provides turnkey LNG/LCNG fueling facility fabrication and construction services including excavations, foundations, paving, canopy, lighting, fencing, new utilities (power, water, sewer), in addition to the complete LNG/LCNG fueling system.

Engineering Services

GP Strategies offers complete Professional Engineering services to design and permit your LNG/LCNG fueling facility. All design and permitting is provided by in-house Registered Professional Engineers and Designers with years of experience in the design of alternative fuel station. GP Strategies has been the engineer of record for over 40 LNG/LCNG fuel stations since 2001, providing the design standard for most LNG/LCNG station configurations, allowing for a quick permitting process. GP Strategies is a voting member on LNG/LCNG code committees, helping to define the code standards for these stations. Since we perform all engineering in-house with pre-established solutions for almost every LNG/LCNG configuration, GP Strategies can be your single source for complete station design and construction.
